This home is located on a cul-de-sac of a quiet development adjacent to a local metropark. The living areas are generally shaded and oriented to the south with views of a wooded wetland area of the park. Bluestone, synthetic plaster, and colored concrete are utilized as the primary exterior materials, selected to blend into the landscape. Wood ceilings and stone flooring define and unify two primary axes through the structure. The main hall, terminating at each end with views into the woods, divides the plan longitudinally. This axis also includes the dining room and foyer and serves as a gallery for the owner's contemporary art collection. A transverse axis begins with a low concrete wall at the entrance and foyer, which draws one through the living room, and out to the more private rear deck and terraces.
